SAFE | Risk Treatment Workflow

Full Visibility Into Your Risk Treatment Efforts

In the current cybersecurity landscape, merely identifying risks is not enough. Organizations need a structured, actionable process to mitigate and manage these risks effectively. Key challenges:

- **Fragmented Risk Management:** Risk management processes are often scattered across multiple systems and departments, making it difficult to have a unified view of risk treatment efforts.
- **Lack of Actionable Plans:** Organizations may identify risks through assessments but fail to convert these into concrete, actionable treatment plans.
- **Difficulty Measuring Impact:** Even when risks are treated, it's challenging to measure the business impact, such as risk reduction, return on investment (ROI), and cost savings, leaving security teams unable to demonstrate the value of their efforts to leadership.

SAFE's Risk Treatment Workflow is designed to transform how security teams move from risk identification to impactful action, ensuring continuous risk mitigation, real-time visibility, and measurable business outcomes.

Core Capabilities

💡 **Centralized Risk Treatment Center**
A unified repository for all risk treatment plans, offering detailed information on treatment actions, timelines, priorities, and progress.

💡 **Real-Time Updates**
Get real-time visibility into the progress of your risk treatment efforts, ensuring timely action on the most critical risks.

💡 **Measurable Outcomes**
Calculate the expected risk reduction, ROI, and cost savings of your treatment efforts, providing tangible metrics that demonstrate business value.

💡 **Customizable Risk Treatment Plans**
Create tailored plans for specific risks, whether at the Group, Risk Scenario, or Control level, with clear actions such as Improve, Mitigate, or Accept.

With SAFE's Risk Treatment Workflow, you can monitor all risks in real-time, ensuring timely action on critical issues. It allows you to create tailored risk treatment plans, helping to mitigate vulnerabilities and improve security controls. Additionally, the workflow provides clear metrics to quantify the ROI of your efforts, enabling you to showcase the value of your security initiatives to leadership and align your actions with business goals.
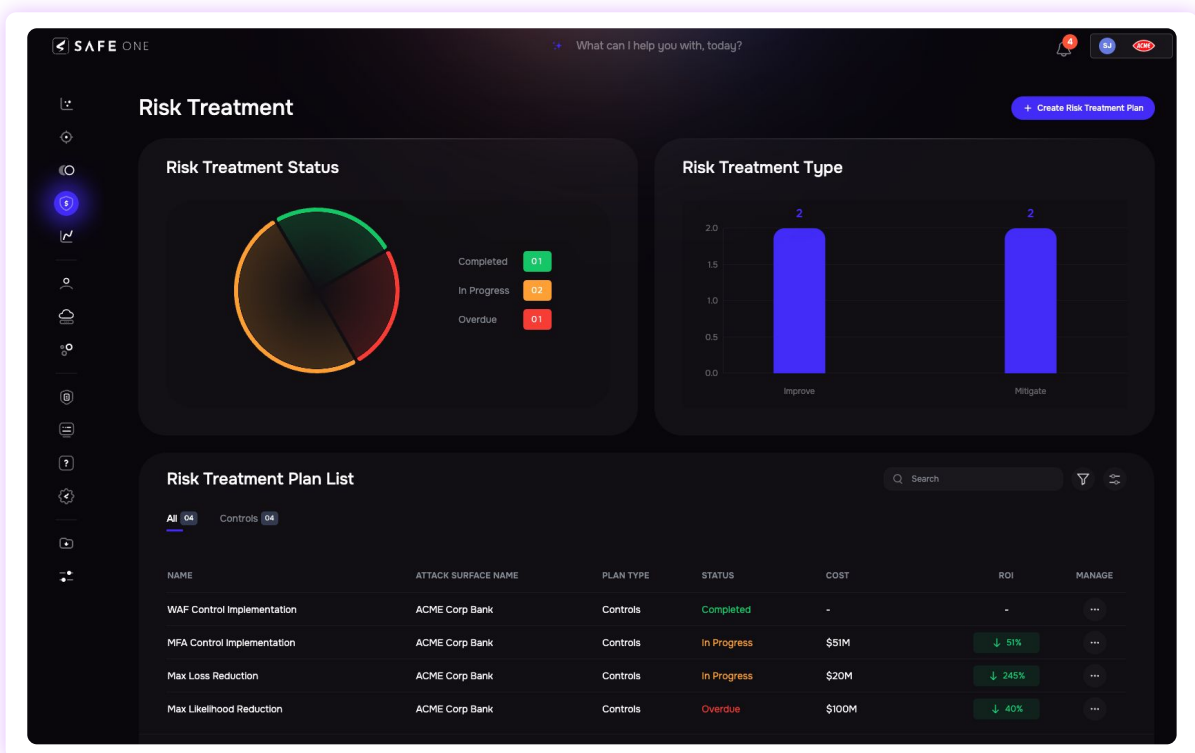

Why SAFE's Risk Treatment Workflow?

1. Real-Time Risk Visibility

The Risk Treatment Workflow provides a centralized view of all risks and their treatment statuses, whether completed, in-progress, or overdue. The Risk Treatment Center consolidates all treatment plans, offering real-time visibility and the ability to track progress at every stage.

What It Means for You: Security teams can monitor the status of all risks and ensure that the most critical threats are addressed first. This level of visibility allows for better decision-making and prioritization.

**2. Taking Action: Operational Risk Reduction**

Once you understand your risks, reducing them operationally involves fixing key findings. However, since you can't practically fix all findings, prioritization is critical. The Risk Treatment Workflow helps you prioritize and determine which findings to address first by showing the potential risk reduction from each action.

What It Means for You: With a structured approach to prioritizing and fixing findings, you can focus on mitigating the most critical risks first, improving operational efficiency and reducing overall risk exposure in a targeted way.

3. Delivering Value: Strategic Risk Treatment and ROI

On a strategic level, risk treatment is about making decisions that provide the best return on investment (ROI) for your security initiatives. The Risk Treatment Workflow enables you to assess the ROI of various strategic actions, helping you justify investments and budgetary resource allocation.

What It Means for You: By quantifying the impact of these strategic actions, you can clearly communicate the business value of your security investments to leadership.

Cost Benefit Analysis			Edit
GROUP NAME			
ACME Corp Bank			
Cost	Likelihood Reduction	Annualized Loss Reduction	Return of Investment
$100M	68%	$140M	40%

Ready to Transform Your Risk Management Process?

The Risk Treatment Workflow is now available as part of the SAFE One platform. By providing real-time visibility, proactive risk treatment, and measurable outcomes, SAFE is helping organizations turn cybersecurity risks into actionable insights that drive business value.
