SAFE CRQ: Autonomous Cyber Risk Quantification With Agentic AI

SAFE

Today, teams are buried under siloed tools that fail to prioritize critical risks, regulators demand transparency, and boards expect clear visibility into risk decisions based on ROI. Legacy solutions fall short, relying on black-box methods that produce opaque insights.

Cyber Risk Quantification is reshaping how security and risk teams operate, moving toward a future where risk is measurable, defensible, and fully integrated into business strategy. **A modern approach that's purpose built for today's challenges is a pressing requirement.**
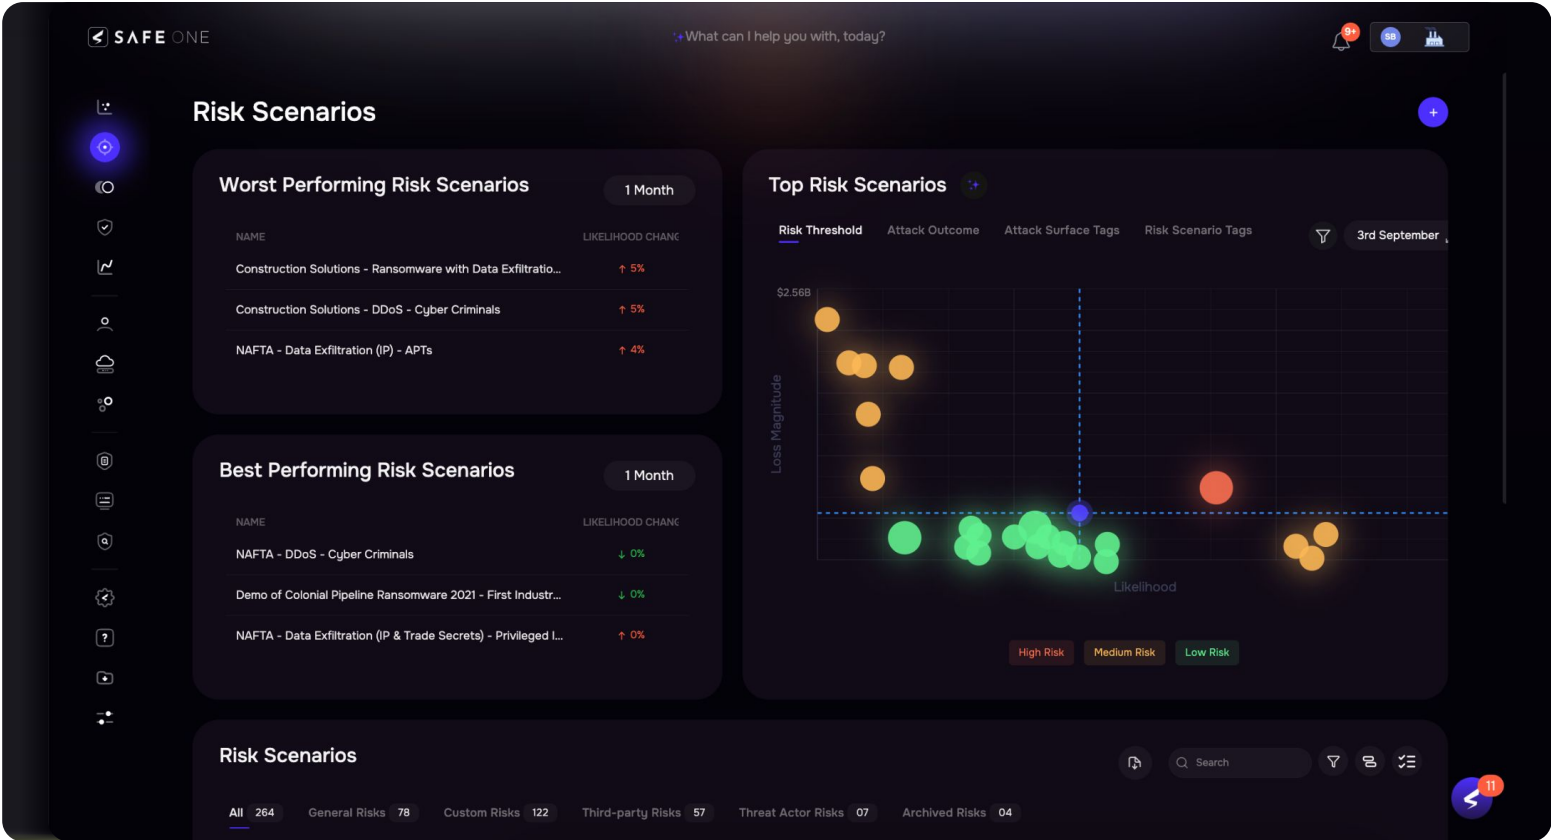

SAFE CRQ
The Leader in Autonomous Cyber Risk Quantification

Powered by Agentic AI, SAFE delivers a fully autonomous approach to Cyber Risk Quantification. SAFE empowers CISOs to understand and communicate cyber risk objectively and in real-time, prioritize risk mitigations based on a data-driven approach, and articulate the value of cybersecurity. **SAFE has been named "the most comprehensive CRQ-native solution" in The Forrester Wave™: Cyber Risk Quantification Solutions (Q2, 2025).**

Solution Highlights

Industry's only autonomous cyber risk quantification solution powered by Agentic AI

Transparent, defensible, and purpose-built on open standards (FAIR™, MITRE™, NIST™)

Automated risk aggregation with the tools you already use featuring OOTB 100+ integrations

Granular view of enterprise-wide risks across Groups like Business Units and Business Apps

Automate controls effectiveness using FAIR-CAM to get risk impact in financial terms

Get comprehensive FAIR cyber risk scenarios to manage cyber risk in real-time

Defensibly determine incident materiality using our built-in FAIR-MAM framework.

Clearly articulate ROI of security controls to justify budgets effectively

Get instant answers to the cyber risk questions with GPT-enabled chat interface

Customer Benefits

1. Continuous Cyber Risk Assessment & Monitoring

SAFE CRQ takes you beyond static, audit-driven tasks towards continuous risk monitoring. It ingests telemetry from 100+ tools to surface your most critical risks, benchmark security performance against industry peers, and provide visibility into existing controls. With clear insights into what's missing and how to improve, SAFE CRQ helps burn down risk.

2. Efficient Reporting & Communication with the Board & Regulators

SAFE CRQ helps CISOs to translate the bits and bytes of cyber risk into dollars and cents, enabling CISOs to tell a compelling story to relevant stakeholders. SAFE offers customizable dashboard views to showcase a cyber risk view that matters most. Users can also generate trustable and defensible reports for regulators, including the SEC, NYDFS, and more.

3. Strategic Investment Planning Based on ROI

SAFE CRQ enables precise project prioritization, budj=get justification, and tech stack rationalization by mapping every security initiative against its expected reduction in financial exposure. SAFE shows exactly which initiatives lower risk, by how much, and at what ROI. CISOs can compare initiatives side by side and focus on those that deliver the greatest impact

4. Risk Based Operational Prioritization For Controls Effectiveness

SAFE CRQ is the first and only solution that has implemented the FAIR-CAM model to automate and translate controls effectiveness to risk and give you the impact in financial terms. SAFE also automates the assessment of controls' maturity. It auto-populates cyber risk control coverage, capability, and reliability, removing any manual effort or bias.

5. Continuously Manage Emerging Risks, including AI

SAFE CRQ enables CISOs to assess and manage the risk associated with GenAI risk scenarios and other emerging risks. By prioritizing emerging risks, SAFE ensures resources are directed to the areas with the highest potential business impact. SAFE's Resilience assessments give leaders confidence that their organizations can recover from these new risks.
