

SAFE ONE

Industry's Only Unified Cyber Risk Management Platform

As the cyber risk landscape continues to evolve, businesses struggle to keep pace with expanding attack surface. It is imperative to shift how cyber risk is managed: Risk, which should be at the forefront of cyber “risk” management, is being overlooked, and instead, activities and tasks are taking precedence. Today’s cybersecurity approach needs to move from a reactive and threat-driven approach to one that is unified, automated, predictive and proactive. **Cyber risk needs to be measured, managed, and mitigated.**

Say Farewell to Siloed, Fragmented, Manual Solutions!

SAFE One delivers industry’s only data-driven, unified platform for managing all of your first-party and third-party cyber risks in real-time. It enables organizations to effectively measure and reduce cyber risk and track progress. SAFE One solves the three biggest challenges that security leaders struggle with, by providing dynamic enterprise-wide cyber risk visibility, improved cybersecurity communication with stakeholders, and an ROI-driven method for operational risk prioritization and budget justification.

OLD GAME

Piece-meal Cyber Risk Visibility

Manual, Point-In-Time

Risk Mitigation Actions - Guesswork

Compliance-Focused

Closed, Black Box Models

NEW GAME

Cyber Risk Singularity

Automated, Real-Time

Risk Mitigation Actions - AI-Prioritized

Risk-Focused

Open Standards-Based (MITRE, FAIR, NIST)
