

Simplicity and Speed

Leverage the data you already have and transform how you manage cyber risk

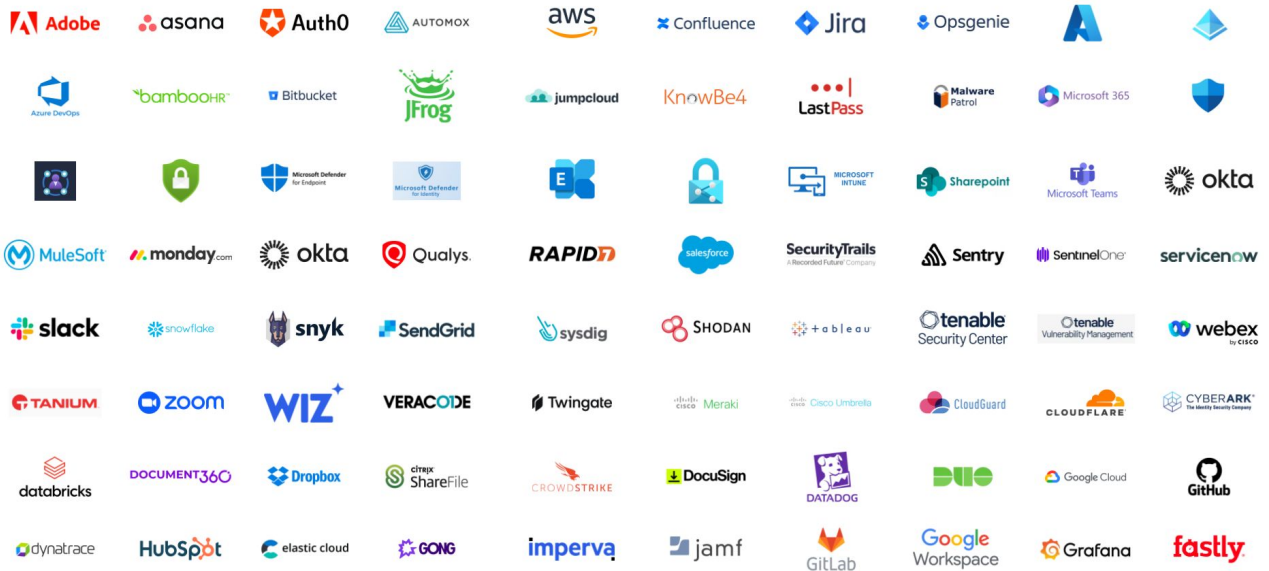

The SAFE One Platform delivers the industry’s most comprehensive and exhaustive list of technology integrations with cybersecurity controls. The 100+ integrations, available out-of-the-box, provide cybersecurity teams with unified and integrated enterprise-wide visibility, AI-powered analytics, and real-time cyber risk quantification and management capabilities.

The integrations empower security teams to visualize signals and telemetry data collected by disparate security solutions from all products, including cloud workloads, EDRs, email, identity, vulnerability management, and more, within a single dashboard.

Key Solution Benefits

- Industry’s most exhaustive and comprehensive OOTB API integrations with 100+ integrations
- Unified controls visibility: Experience an enterprise-wide cyber risk management approach
- Prioritized and actionable insights: Leverage aggregated data of your security tools on a single platform
- Bespoke cyber risk scenarios: Manage cyber risk and allocate resources more effectively
- Quick and easy onboarding: Spend just 15 seconds per integration with your secure API-based key.
- Complete security and data privacy: Deploy SAFE One on your own AWS account.

100+ Integrations (GA)

Simplicity and ease of deployment are core tenets of SAFE One. SAFE offers over 100+ out-of-the-box (OOTB) integrations to discover and onboard assets and signals. Thanks to its exhaustive coverage, SAFE seamlessly integrates with the tools you’ve already deployed within your estate to equip you with real-time insights from across the enterprise. A guided wizard setup expedites setup, giving you instant visibility and protection in your cyber risk posture without the need to deploy any agents.

CUSTOMER BENEFITS

Move from a Manual to an End-to-End Automated Approach

SAFE One integrations seamlessly collect various cyber risk telemetry signals from your controls, offering instant visibility into your risk exposures and vulnerabilities. This eliminates the need for cybersecurity teams to manually sift through disparate spreadsheets to verify data. With SAFE One's integrations, all necessary information is automatically consolidated and prioritized in a unified manner, streamlining the risk management process.

Experience Unified Controls Visibility and Management

SAFE One offers a unified and centralized control dashboard that provides visibility into the data and signals from all cybersecurity controls on a single screen. This dashboard is continuously updated with alerts from all your security tools and projects, prioritizing them for easy management. With this unified view, security leaders can efficiently monitor and manage all controls from a single dashboard, simplifying their oversight and decision-making processes.

Get Enhanced Actionable Insights Across Your Entire Attack Surface

Risk teams can view the current posture of their assets, BUs, and more and plan for risk reduction using the actionable insights provided by SAFE. With consolidated signals from all sources, organizations can prioritize the most critical issues.

Unlock Granular Asset Management

The integrations pull in the desired asset tags from security tools into SAFE, enabling teams to group their unique assets by threats or business units. This helps team-specific risk assessments and focuses on managing a unit's overall risk.

Build Bespoke and Scenario-Specific Risk Assessment

Finally, the SAFE integrations enable organizations to assess the likelihood of specific scenarios, such as ransomware or data compromise, and prioritize underlying risk issues. This empowers security teams to focus on the most critical scenarios and allocate resources more effectively to reduce the likelihood of these risks.

INTEGRATING TO WIN CYBER RISK MANAGEMENT

In the SAFE One Platform, team members can integrate any security applications and tools, regardless of the vendor, without coding or scripting. Because of the simplified, API key-based approach, SAFE One customers can experience the benefits of cyber risk quantification and management within minutes of deployment.

Transform your cyber risk management from a manual, fragmented process to a streamlined, unified strategy.
