

Meet Your Specialized AI Agents

The Power Behind SAFE TPRM

Third-Party Risk Management has never been more critical—or more broken.

SAFE's Agentic AI is built for scale, not just speed.

These purpose-built AI Agents operate like tireless virtual analysts, working 24/7 across hundreds—or even thousands—of vendors. While fully autonomous, they're designed with a **"human-in-the-loop"** approach, giving teams the ability to override, approve, or customize actions whenever needed. Collaboration is seamless too—vendors can securely respond, self-serve, and update their records, reducing back-and-forth and accelerating the entire third-party risk lifecycle.

Discover the power of Agentic AI-driven third-party risk management, enabling:

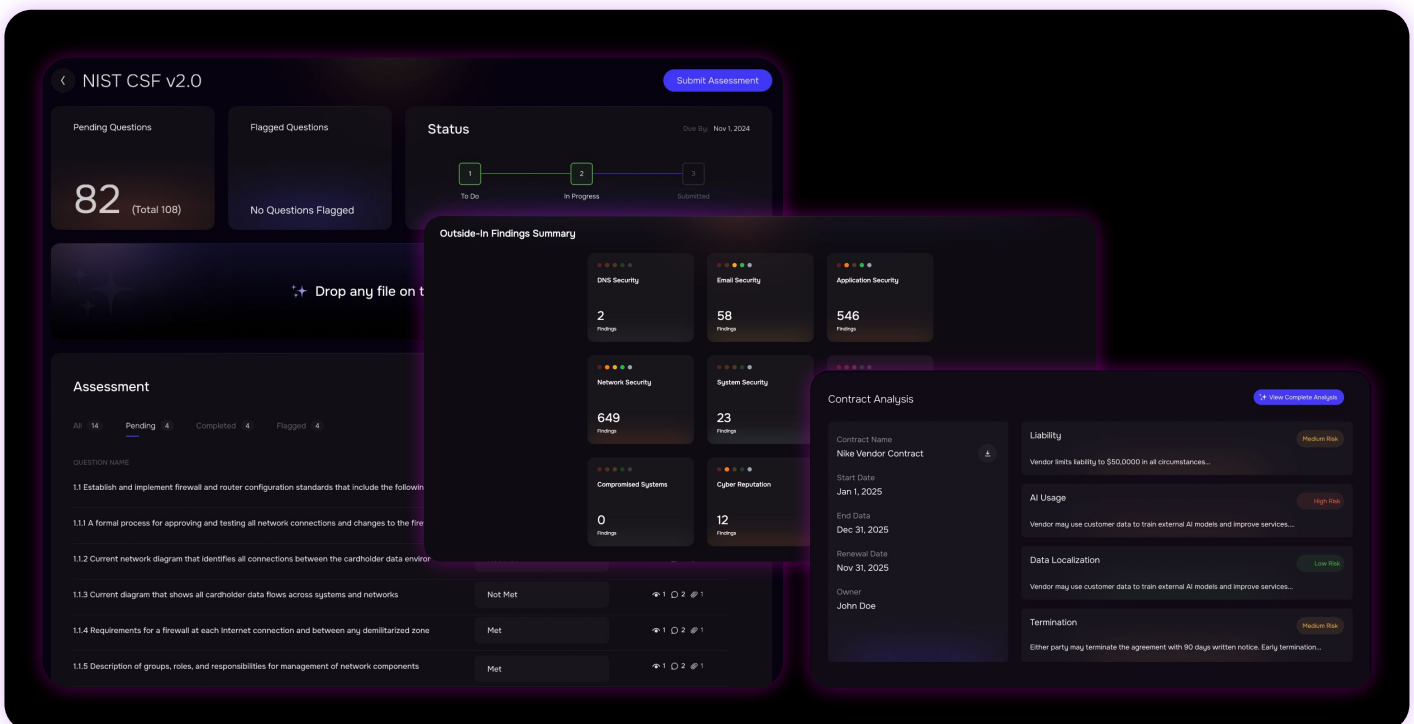

- ✓ 100% Autonomous TPRM
- ✓ Zero-Effort Vendor Interaction
- ✓ Scaled-Up Third Party Coverage

What Makes SAFE's AI Agents Different?

- Smart Triggers and Real-Time Activation**
 SAFE's AI Agents trigger actions without any human input—driven by real-time risk signals, contextual events, or time-based rules.
- Multi-Source Signal Aggregation**
 Each agent pulls from rich external sources: trust centers, DNS records, SEC filings, breach portals, threat feeds, and security registries.
- Autonomous Processing with AI + LLMs**
 The agents use NLP and LLM-powered reasoning to read documents, extract key metadata, highlight contract risks, or map to compliances (like PCI-DSS).
- Integration-Ready and Human-Aware**
 Everything is API-first. Agents push structured results to SAFE's dashboard, GRC tools, procurement systems, or Slack.

Why Now? The Tipping Point for AI in TPRM

SAFE's AI Agents mark a turning point in how third-party risk is managed—**autonomous, event-driven, and built to take action** without waiting for manual triggers. **With over 25+ specialized AI Agents** covering everything from discovery to continuous monitoring, SAFE delivers full lifecycle coverage that scales effortlessly across thousands of vendors.

What AI Agents Do

Public Records Agent Surfaces critical risk signals from multiple sources like SEC filings, breach databases, trust centers, and more	Digital Footprint Agent Builds a third party's digital risk profile using domain data and online presence	Outside-In Agent Continuously scans a vendor's external attack surface to identify exposed assets and risks	Threat Intel Agent Continuously checks for threat indicators from past breaches and assets including exposed S3 buckets
Trust Center Agent Parses trust centers to auto-extract certifications, policies, and security artifacts	Fourth-Party Agent Uncovers hidden fourth parties by mapping downstream vendors like AWS, Slack, Okta, and more	Contract Intelligence Agent Analyzes contracts to flag missing clauses, compliance risks, and security misalignments	Auto-Fill Agent Pre-populates 95% of questionnaires with known data to save time and ensure consistency
Communication Agent Automates reminders, clarifications, and auto-drafts follow-ups to vendors	Assessment Reviewer Agent Highlights incomplete, inconsistent, or expired responses across submitted assessments	Evidence Analyzer Agent Reviews uploaded documents and auto-classifies them enabling quick analysis and review	Monitoring Agent Tracks third-party risk posture over time and alerts on key changes, breaches, or reassessment triggers

"SAFE has really brought true innovation to cyber risk management. SAFE handles the creation, outreach, follow-ups, and gets us what we need—without all the back-and-forth. We're completing assessments faster and with more insight than ever, and the best part is, it requires almost zero effort from my team. I've gained maturity and capacity without adding headcount."

Dr. Heather Dart
 Sr. Manager of IRM
 at Danaher

Why Should You Trust SAFE's AI Agents?

Transparent by Design: Every action taken by SAFE's AI Agents is fully traceable. From data sources used to decisions made, teams can audit and validate how outcomes were reached—ensuring explainability, not black-box automation.

Human-in-the-Loop Governance: Agents are built to assist, not replace. Analysts retain full control over assessments, with override, review, and approval options available at every stage—ensuring critical judgment always stays with the team.

Security and Privacy Built-In: All data is encrypted in transit and at rest. Agents follow enterprise-grade security protocols and are deployed in compliance with data residency laws and privacy regulations like GDPR.
