

SAFE ONE - TPRM

Automate, Unify and Run Your TPRM Program at Scale

As the third-party attack surface explodes, these challenges overwhelm CISOs and TPRM leaders:

- **Visibility:** The conventional piecemeal approach makes it difficult to identify the riskiest vendors, making third-party risk a blind spot.
- **Mitigation:** Leaders don't have an ROI-driven, prioritized and actionable insights to quantifiably reduce third-party risks.
- **Automation & Scale:** Automating and scaling TPRM programs is challenging as it is predominantly manual with multiple siloed TPRM tools.

TPRM needs to be reimagined with an unified, automated, scalable, and defensible approach.

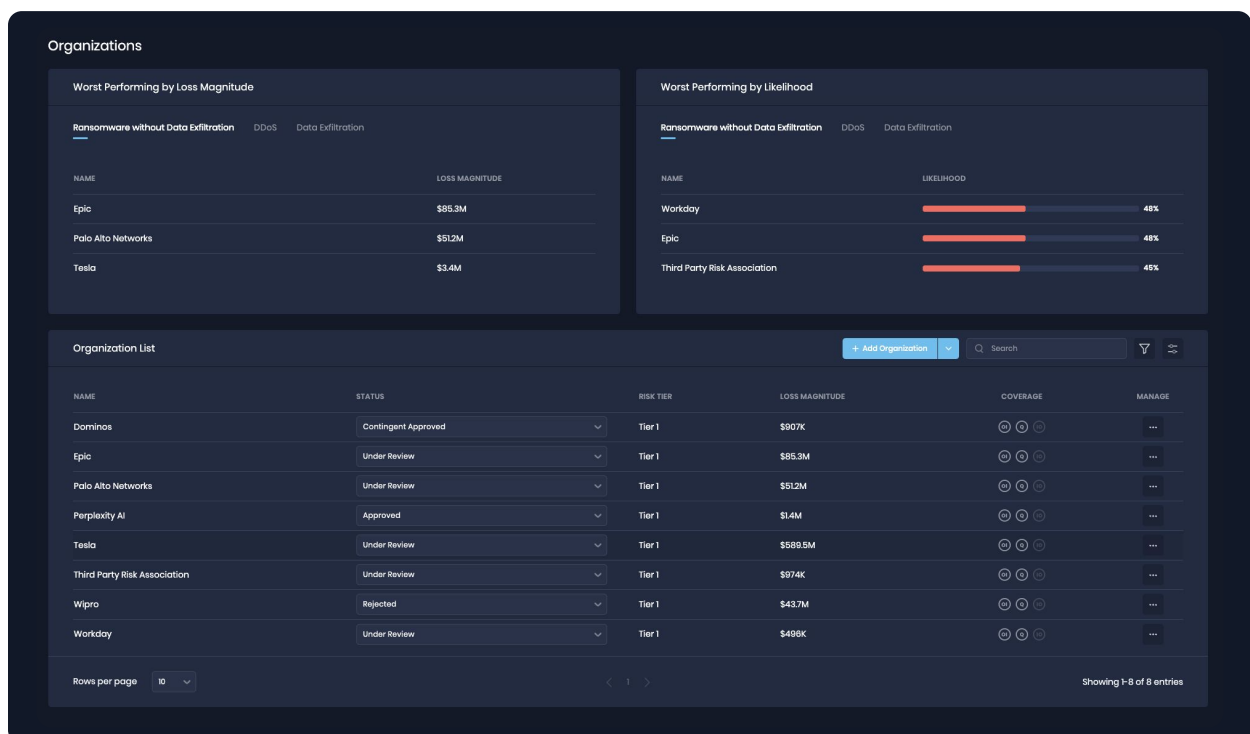

SAFE Transforms the TPRM Game

SAFE TPRM is the industry's only AI-powered third-party risk management solution, which equips businesses with the benefits of outside-in security ratings, questionnaire-based assessments, zero-trust, and inside-out scans.

Using SAFE One's unified platform, enterprises can finally get holistic, realistic, dynamic, and dollar-driven insights into their supply chain risk posture.

Does Your Existing TPRM Solution Help You To:

- Know who your riskiest third parties are in dollar terms?
- View consolidated data from threat feeds and third parties?
- Learn how effective your security controls are against third-party risks?
- Enable your third parties on how to mitigate risks?
- Automate and scale your third-party security program?
- Visualize all third-party risks on a single, unified platform?
- Understand, tune, and defend your TPRM outputs?
- Optimize and reduce your TPRM program costs?

Build, Scale, and Automate Your TPRM

01 | Risk-based TPRM

SAFE TPRM calculates the dollar risk and breach likelihood of cyber risk scenarios that could impact an enterprise based on their supply chain data access, network access, and resultant business interruption. This enables CISOs to tier their most critical vendors based on loss exposure instead of values such as size or revenue. SAFE also suggests prioritized and ROI-driven recommendations that leaders can leverage to work with vendors and minimize their cyber risk gaps.

02 | AI-Driven Automation to Scale and Build Your Program

SAFE TRPM automates third-party risk management by automating data ingestion and analyzing security assessments and questionnaires to provide real-time, prioritized insights. This enables businesses to move away from siloed, manual, and point in-time practices towards a unified, automated, and dynamic TPRM approach.

03 | Unified Third-Party Cyber Risk Management Platform

SAFE One is the only solution that enables businesses to manage their third-party and first-party risks from a single platform. It continuously consolidates third-party risk data using 100% automated controls telemetry from outside-in, questionnaires, and inside-out assessments, providing a complete picture of the most critical risks.

04 | Zero Trust-Driven Insights on Organizational Controls

Zero trust principles drive SAFE TPRM and provide real-time visibility into how well first-party controls are configured to minimize third-party breaches. This enables CISOs and TPRM leaders to make data-driven decisions and redirect resources to enhance their native cybersecurity posture.

05 | Purpose-Built on Proven, Industry-Leading, Open Standards

SAFE TPRM is the industry's most transparent and defensible solution. It is built ground-up leveraging the FAIR™, FAIR™-TAM, FAIR™-CAM, and FAIR™-MAM standards. It also automatically maps third-party risks to the MITRE™ ATT&CK and D3FEND frameworks for real-time attack surface visibility.

06 | Reduce and Optimize the Total Cost of TPRM

SAFE TPRM's predictable and all-inclusive pricing reduces costs by covering unlimited vendors without additional fees. It also enables seamless software stack consolidation and equips businesses to scalably plan and justify their third-party management costs.
